ORDER Execution

It's All In The Execution

You've done your technical analysis, your fundamental analysis, been monitoring market positions and according to all your hard work, the planets are perfectly aligned for you to enter, what you believe to be a profitable trade.

However, in a game with thin margins and high leverage, where every pip is worth a disproportionate amount of money, can you be sure that you are getting the best execution on your order?

NSBroker offers Electronic Communication Network technology

ECN: The Electronic Communication Network is the technology that helps provide liquidity for traders resulting in tight spreads and quick trade execution with minimal market impact. ECN runs on the MetaData4 platform and provides variable spreads.

Execution Speed and Market Depth The NSBROKER platform is connected to the ECN trading platform so all orders are instantly routed through NSBROKER to the Tier 1 liquidity providers for the quickest and best order fill.

NSBROKER, as a secure, regulated and reputable broker has contracted with Tier 1 liquidity providers such as Citi, Barclays and Deutsche Bank to execute orders through the ECN trading platform directly to the bank's trading book. This enables NSBROKER clients to receive the best institutional trading conditions for their private trades

In fact, NSBROKER's ECN platform utilises a price aggregation model which selects the best pricing feed from multiple liquidity suppliers. This ensures the best Bid and Ask prices at any given moment giving **NSBROKER** ECN traders a substantial trading advantage

The combined liquidity from the ECN platform, NSBROKER's Tier 1 liquidity providers and the price aggregation model ensure not only tight spreads but also outstanding order execution.

Order Types and their Execution There are numerous order types that can be

It's All In The Execution utilized for your benefit when trading **Forex**.

Different order types have the ability to mitigate risk, quickly take advantage of pre-determined scenarios, lock in profits, minimize losses or maximize profits. Order types include: Market, Limit, Stop, Stop Loss, Take Profit, Place/Bid offer, Trailing Stop, Stop Limit, OCO, IFD, GTC and more.

The order types generally linked with potential execution irregularities are the Market, Stop and Limit orders. During extremely market volatility, placing a Market Order, Stop /Stop Loss Order, Limit/ Limit Entry Order can result in you receiving a fill substantially better or worse than you anticipated. The difference between your anticipated entry or exit price and your actual entry or exit price is called 'slippage'.

Slippage can be 'positive' or 'negative'. When it results in you receiving a fill better than you anticipated, it is positive; when it results in you receiving a fill worse than you anticipated, it is negative.

In general, Stop /Stop Loss Orders receive negative slippage and Limit/Limit Entry Orders positive slippage.

The best way to avoid slippage is to use orders with specific price points.

Trade with Certainty NSBROKER Ltd. holds a Category 3 investment services license (License No. IS/56519) issued by the Malta Financial Services Authority (MFSA).
